SUMMARY

Dedicated Data Center Technician with hands-on experience in large-scale, mission-critical environments. Skilled in racking, networking, cabling, break/fix, diagnostics, and hardware repair across servers, networking devices, and storage systems. Proficient in SOP execution, asset management, secure DBD replacement, labeling, documentation, and compliance enforcement. Recognized for strong troubleshooting, ticket quality, cross-shift communication, and adherence to safety (THA/EHS) and operational KPIs. Fast learner with a collaborative mindset, consistently focused on safety, accountability, and operational excellence while supporting production workloads in on-call and night-shift operations.

EDUCATIONAL BACKGROUND

AFRICAN LEADERSHIP UNIVERSITY – Kigali, Rwanda **September 2017 – May 2021**
BSc, Computer Science

SKILLS

Technical Proficiencies: IT Hardware installation & repairs, Troubleshooting, Break/Fix, Diagnostics
Networking: LAN, Mesh Wi-Fi Network Systems, DHCP, VPN, DNS, TCP/IP, RDP, MGFX, DCFX, Putty, Linux
Optics & Cabling: QSFP, SFP, LC, MPO, PSM4
Power & Cooling: PG25,Callan
Safety & Security: THA, ESD, DBD Privacy Standard
Cloud: Azure Entra, Microsoft 365, AWS, GCP

CERTIFICATIONS

- Microsoft Certified: AZURE SECURITY ENGINEER ASSOCIATE (Feb 2022)

PROFESSIONAL WORK EXPERIENCE

TEKSYSTEMS - MICROSOFT – Lithia Springs, Ga **December 15, 2025 - Present**
DATA CENTER TECHNICIAN

- Guided team members through GB300 server chassis replacements and instructed on proper use of the Fill/Drain Kit for PG25 coolant insertion and drainage
- Maintained rigorous asset and data-bearing device traceability, capturing serial numbers and part identifiers during hardware handling and DBD-related workflows in alignment with data management controls.
- Executed Azure Wire (AzWire) deployments, ensuring compliance with post-energization and production readiness standards
- Performed Layer 1-3 network validation, including TCP/IP connectivity testing, loopback verification, and logical port configuration
- Installed, tested, and commissioned OMT, MUX/DEMUX, OWR devices, and optical line cards, ensuring end-to-end signal integrity
- Conducted fiber inspection, cleaning, and validation using fiberscopes, identifying contamination, face defects, and optical impairments
- Troubleshot optical and network issues, isolating faulty fibers, ports, or transceivers and executing remediation or escalation as needed

- Validated physical and logical deployments, ensuring accurate asset tagging, topology mapping, and parent-child device relationships
- Executed 2nd-person Quality Control (QC) checks to verify hardware installation, logical configuration, cabling accuracy, and PO compliance
- Performed post-energization checks, including power verification, grounding inspection, logical readiness, and operational handoff
- Supported deployment operations using Microsoft internal systems including PhyNet, GDCO, and WAL, providing detailed documentation and task updates
- Performed power and fiber cable audits, ensuring proper routing, labeling, organization, and compliance with safety and serviceability standards
- Collaborated closely with cross-functional teams, vendors, and shift leads, delivering structured handoffs and maintaining deployment continuity

AKKODIS - GOOGLE DATA CENTER – Lithia Springs, Ga **August 2025 - December 11, 2025**
DATA CENTER TECHNICIAN

- Completed 10,000+ tasks, including 4,500 unique deployments and repairs, showcasing consistent productivity and versatility in a fast-paced environment
- Serviced and maintained ~100 machines daily, performing diagnostics, repairs, and component replacements; reduced unnecessary kit swaps, improving overall data center heartbeat and system reliability.
- Performed maintenance and troubleshooting on ML/AI GPU clusters, enabling faster reintegration into production pipelines and higher training throughput.
- Performed secure disk erasure procedures and verified results in compliance with Google's strict data security and privacy regulations.
- Enforced data security policies and ensured adherence to industry standards (GDPR, HIPAA, and ISO guidelines where applicable).
- Conducted server repairs, diagnostics, and maintenance, ensuring minimal downtime and maintaining secure system configurations.
- Executed fiber routing and optics diagnostics to maintain high network availability and prevent data transmission vulnerabilities.
- Diagnosed and repaired network infrastructure errors, collaborating with engineers on hardware and Linux OS debugging.

MAXI AUTO BROKERS – Mableton, Ga **October 2021 - AUGUST 2025**
AUTOMOTIVE SERVICE TECHNICIAN

- Diagnosed fault codes on 100+ vehicles and escalated findings to senior staff, applying the systematic troubleshooting used to keep operations running.
- Collaborated with the team to resolve issues quickly, minimizing downtime and maintaining workflow.
- Followed structured diagnostic and repair procedures, building attention to detail and consistency relevant to distribution and inventory processes.
- Managed multiple vehicle jobs under time pressure, prioritizing tasks to meet turnaround targets.

ADDITIONAL STRENGTHS

- **Problem-Solving**: Diagnose and resolve technical issues effectively.
- **Communication**: Strong written/verbal skills; work well with team members and stakeholders.
- **Teamwork**: Collaborative and reliable in high-pressure environments.
- **Time Managemen**t: Prioritize tasks and meet SLA deadlines.
- **Attention to Detail**: Accurate execution of technical tasks and documentation.
- **Adaptability**: Quick to learn new systems, processes, and technologies.
- **Documentation**: Maintain detailed logs of erasure procedures and results.
- **Compliance**: Enforce data privacy/security standards (GDPR, HIPAA, ISO)
